

4-Way Sand & Water Table

This cleverly designed table lets 4 children explore the properties of sand and water at the same time! The textured tubs lift out easily for cleaning and changing materials, and adjustable legs allow you to choose the right height for your students.

To assemble the table, simply follow the instructions in this guide. We've supplied the hardware, so all you need is a Phillips screwdriver and pliers or an adjustable wrench.

Before You Begin

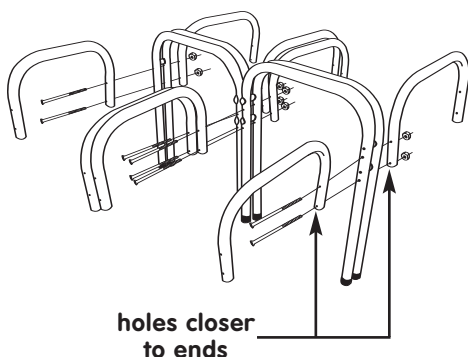

Separate and identify the following components:

- 1 double-center brace
- 2 end braces
- 8 connector braces
- 8 long bolts and locking nuts
- 16 short bolts and locking nuts
- 16 washers
- 4 plastic tubs

Note: Attach the locking nuts with the plastic side facing out, as shown at left.

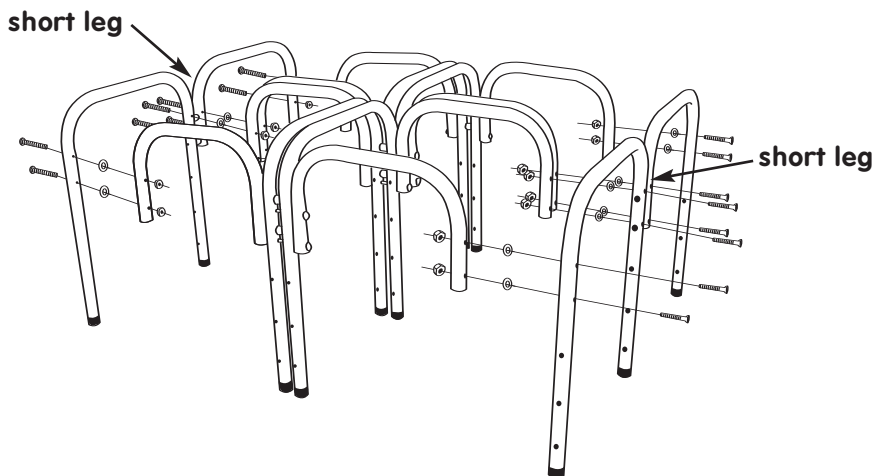

1. Use 8 long bolts and nuts to attach the connector braces to the double-center brace, as shown. **Note that the hole positions on one side of each connector brace are closer to the end of the brace. Make sure that this side goes next to the center brace for all 8 connector braces.** (If the connector braces have been assembled properly, the tops of all the braces will be level.)

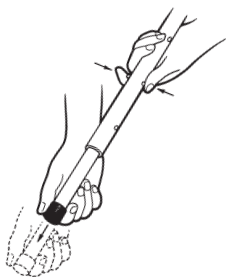

Connect the nuts and bolts loosely. (You will tighten them after all the hardware is in place.)

(continued on back)

2. Use 16 short bolts, washers and nuts to attach both end braces to the connector braces. **Make sure the short legs of the end braces are both on the same side of the assembly, as shown below.** Connect the nuts and bolts loosely.

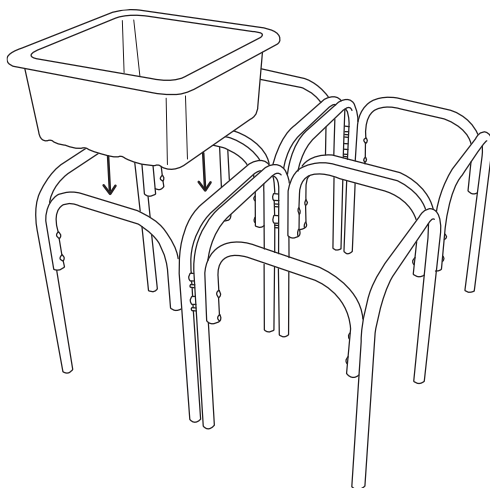

3. When all the hardware is in place, use a Phillips screwdriver and pliers or a wrench to tighten all of the bolts and nuts securely.

4. Adjust the table legs to one of three heights. Simply push in the tabs and slide the legs up or down, as shown. Be sure to keep all the legs at the same height, and to adjust them before you place anything in the tubs.

5. Drop the tubs into place, and fill each one with sand, water or other materials.

That's all there is to it—your new sand & water table is ready for play!
